

Solution Requirements

Date	30 September 2026
Team ID	SWTID-2026-1854
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	The system should allow authorized ServiceNow users to securely access employee data and project features.	High
2	Authorization levels	The system should provide appropriate access permissions for administrators and authorized users to manage employee data.	High

3	External interfaces	The system should support importing employee data from spreadsheet files into ServiceNow using Import Sets and Transform Maps.	High
4	Transactions processing	The system should process employee data from the spreadsheet and create or update employee records in the Employee Test table.	
5	Reporting	The system should generate employee reports based on department, location, and employee details and display analytics through a dashboard.	
6	Business rules, etc.	The system should validate employee data and ensure that imported records contain the required information before storing them.	
7	Compliance to laws or regulations	The system should protect employee information and provide access only to authorized users according to applicable data privacy requirements.	
8	<i>Other</i>	The system should allow users to easily view, manage, and monitor employee records through ServiceNow.	

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should load employee records, reports, and dashboard information quickly.	Pages and reports should load within 3 seconds under normal usage.
2	Scalability	The system should support an increasing number of employee records without major performance issues.	Should support at least 10,000 employee records .
3	Security & Data Privacy	Employee data should be protected from unauthorized access and only authorized users should access employee information.	100% of employee data should be accessible only to authorized users.
4	Reliability & Availability	The system should reliably store and retrieve employee data and remain available during normal operations.	System should be available during normal working hours with minimal failures.
5	Usability & Accessibility	The system should provide a simple and easy-to-use interface for managing employee data, reports, and dashboards.	Users should be able to perform common tasks with minimal training .

6	<i>Other</i>	The system should be easy to maintain and update when employee data or reporting requirements change.	Changes should be implemented without affecting existing employee records and reports.
