

Scalability & Future Plan

Date	30 September 2026
Team ID	SWTID-2026-1854
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	The current project uses a limited employee dataset for the implemented demonstration.	Handling a much larger number of employee records may require additional data management and performance checking.	Medium
2	Dedicated performance testing was not carried out using tools such as JMeter or k6.	Detailed response time, throughput and resource usage under heavy load are not currently measured.	Medium
3	The project currently provides basic employee reports and dashboard views.	More advanced analytics and additional reporting options may be needed for larger-scale usage.	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	The project is designed for authorized ServiceNow users and project demonstration.	Support more users through proper ServiceNow roles, access controls and platform configuration.
2	Data Storage		

		Employee records are stored in the Employee Test table in ServiceNow.	Increase the number of employee records and maintain proper table and data management as the dataset grows.
3	Performance	Employee import, reports and dashboard were functionally verified.	Perform dedicated performance testing and optimize data import, reports and dashboard components for larger data volumes.
4	Security	Employee information is accessed through the ServiceNow platform with controlled access.	Strengthen role-based access and access controls to ensure only authorized users can view or manage employee information.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Expand employee data handling to support a larger number of records and improve data validation during import.	1–2 Months	Better scalability and improved data accuracy
Phase 3	Add more employee reports, advanced dashboard views and improved analytics.	3–4 Months	Better monitoring and easier analysis of employee information.
Phase 4	Introduce enhanced automation, stronger access controls and dedicated performance optimization for large-scale usage.	5–6 Months	Improved efficiency, security and overall system capability.
